12. Critical illness definitions (applies to Clause 4.3)

12.1 Cancer of specified severity

A malignant tumour characterised by the uncontrolled growth and spread of malignant cells with invasion and destruction of normal tissues. The diagnosis must be supported by histological evidence of malignancy. The following are excluded: tumours showing the malignant changes of carcinoma in situ,

any non-melanoma skin carcinoma unless there is evidence of metastases, and all tumours of the prostate unless histologically classified as having a Gleason score greater than 6.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.2 Myocardial infarction (first heart attack of specific severity)

The first occurrence of heart attack or myocardial infarction, which means the death of a portion of the heart muscle as a result of inadequate blood supply to the relevant area, evidenced by a history of typical clinical symptoms, new characteristic electrocardiogram changes, and elevation of infarction-specific enzymes, troponins or other specific biochemical markers.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.3 Open chest CABG

The actual undergoing of heart surgery to correct blockage or narrowing in one or more coronary arteries by coronary artery bypass grafting, done via a sternotomy or a minimally invasive keyhole coronary artery bypass procedure. The diagnosis must be supported by coronary angiography and the realisation of surgery has to be confirmed by a cardiologist.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.4 Open heart replacement or repair of heart valves

The actual undergoing of open-heart valve surgery to replace or repair one or more heart valves, as a consequence of defects in, abnormalities of, or disease-affected cardiac valves. The diagnosis of the valve abnormality must be supported by an echocardiogram.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.5 Coma of specified severity

A state of unconsciousness with no reaction or response to external stimuli or internal needs, requiring the use of life support measures to sustain life, and resulting in permanent neurological deficit which must be assessed at least 30 days after the onset of the coma.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.6 Kidney failure requiring regular dialysis

End stage renal disease presenting as chronic irreversible failure of both kidneys to function, as a result of which either regular renal dialysis is instituted or renal transplantation is carried out. Diagnosis has to be confirmed by a specialist medical practitioner.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.7 Stroke resulting in permanent symptoms

Any cerebrovascular incident producing permanent neurological sequelae, including infarction of brain tissue, thrombosis in an intracranial vessel, haemorrhage and embolisation from an extracranial source. Evidence of permanent clinical neurological deficit lasting for at least three months has to be produced.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.8 Major organ or bone marrow transplant

The actual undergoing of a transplant of one of the following human organs: heart, lung, liver, kidney or pancreas, that resulted from irreversible end-stage failure of the relevant organ, or of human bone marrow using haematopoietic stem cells.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.9 Permanent paralysis of limbs

Total and irreversible loss of use of two or more limbs as a result of injury or disease of the brain or spinal cord. A specialist medical practitioner must be of the opinion that the paralysis will be permanent with no hope of recovery and must be present for more than three months.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.10 Motor neurone disease with permanent symptoms

Motor neurone disease diagnosed by a specialist medical practitioner as spinal muscular atrophy, progressive bulbar palsy, amyotrophic lateral sclerosis or primary lateral sclerosis, with progressive degeneration of corticospinal tracts and anterior horn cells, persisting for a period of at least three months.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.11 Multiple sclerosis with persisting symptoms

The unequivocal diagnosis of definite multiple sclerosis confirmed by a neurologist on the basis of investigations including typical MRI findings, with impairment of neurological function persisting for a continuous period of at least six months.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.

12.12 Third degree burns

Third degree burns with scarring that covers at least 20% of the body surface area. The diagnosis must confirm the total area involved using standardised, clinically accepted body surface area charts.

The benefit is payable once per insured person over the lifetime of the policy for this illness, provided the insured person survives for at least 15 days after diagnosis.
